

when dismissing the todo list in the dashboard, the read guide need help divs also should get hidden  
Dashboard Header is not responsive

Project dashboard in mobile view display in card view not tabular view ( to make the dashboard responsive )

In client dashboard archive client is not working

In client dashboard unless we hover on the card or table row the action buttons are not displayed, in mobile view this is be a bug solve this

In client dashboard also in the mobile view display things in card view not the tabular view

In onboarding email the CTA text is invisible and manage preference link is not needed

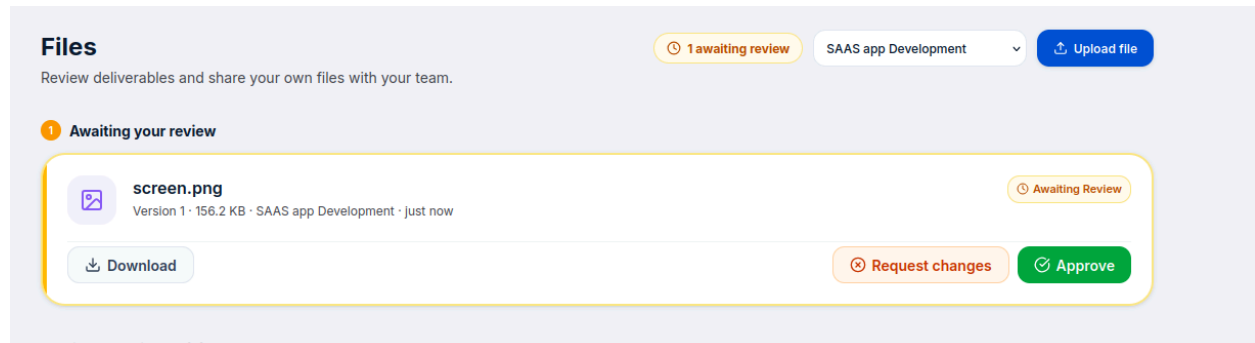

When a user open a link it should create a cookie valid for 30 days and the link should able to use multiple time ( maximum of 4 times )

When a user come to client portal by clicking on the cta initially for a slit second the enter email popup is shown need to stop that

And there is a bug that is for the client portal enter email to verify popup the user can enter any email get the link when user enters any other email other that the email the freelancer has settet up, show an error of not the portal email. When this change is done the chat feature will also need a huge change that is for eg: lets assume client name is Acme and freelancser is Frredev so in te chat interface when chatting all the acme members ( email holders ) should be able to chat with the freelancer via the chat interfance that means current chat is something like 1-1 chat now we have to change to a something like a group chat and as we save the user email ( clients email ) in te group chat instead of the name in whatsapp group chat we can display the email

In the client portal the messages are shown at real time , but in the freelancers chat interface the messages are not shown at real time needs to solve this , this is a critical bug

There is a bug in the logic of when client uploads a file from there end

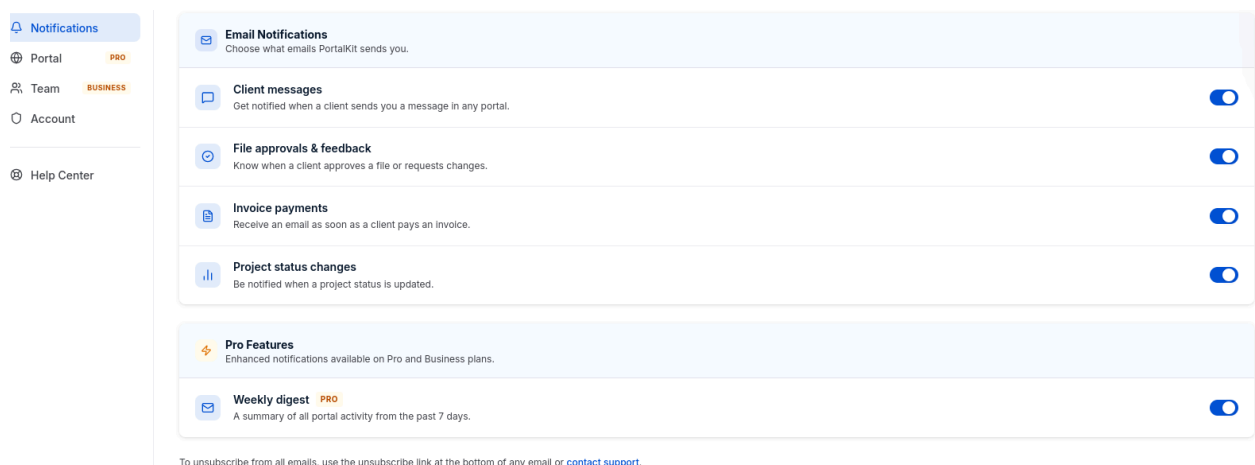

This screen.png was uploaded by the client but in both client and freelancer portal it is shown as pending request , the purpose if client uploading a document is to attach it to chat and say something or to give references to the freelancer or maybe even a payment slip , so when client uploads a file we should not show as pending review instead in the client portal show them in a separate subsection s your uploads and in the freelancer portal display as in a sub section of client uploads

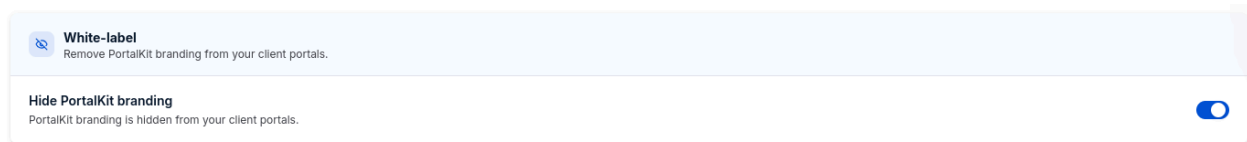

Needs a setup for a client portal the freelancer should be able to add several email, when these email are added all owners of the emails receive the link and all of them view the portal cuz sometimes a single project can have multiple owners

```
POST /api/invoices/35f78c3b-6b1a-4bd8-bb03-585ce2424e7f/resend 500 in 3.4s (next.js: 1055ms, proxy.ts: 16ms, application-code: 2.3s)
```

In invoice resend is not working i get this error

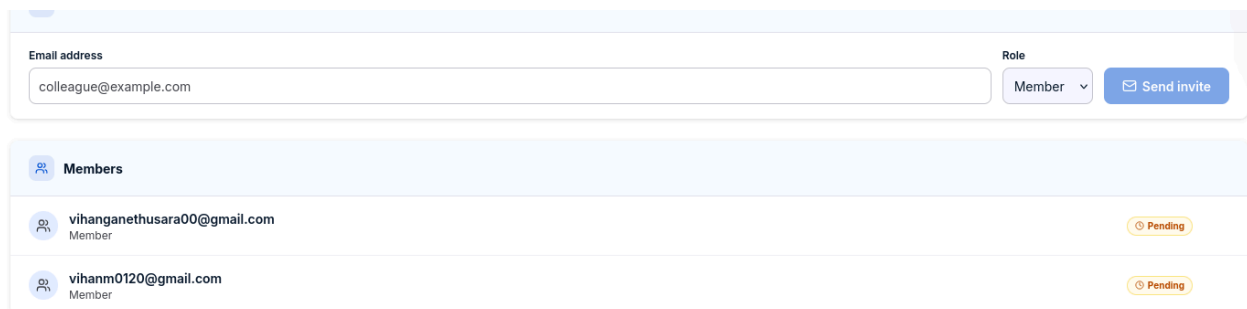

I am in a business subscription account but still these pro and business tags are shows this cannot happen solve this , cuz for business user the full system access is there no need these badges

enabling or disabling of this feature does not have any effect cuz already in the portal no trade marks of portalkit is not shown, so solve this add trademarks , check the freelancers with business subscription should be able to remove these trademarks from invoices, client portal, emails and etc

In teams feature also there are several bugs, that is

as in the image i can invite my self , needs to solve this and then , the account owner does not have an interface to manage the scope of every member and for business subscription 6 team members and for pro subscription 3 team members should be allows and for every extra seat 3\$ should be charged per seat. Based on the accessibility mnaed by the team owner, the things that are visible to members should be varies , need to plan this first
